Recidivism Update for FY1998 – FY 2003

Overview

This report was prepared by the Research, Planning, and Program Evaluation Unit of the Office of Technology and Information Services. The purpose of this document is to provide DJJ managers with data that will support them during their policy making process. This report will be updated annually.

Special Notes

This report incorporates an important departure from how probation recidivism rates were calculated in the FY2004 report.¹ The special database used in the FY2004 recidivism report included "historical" offense and sentencing information from Georgia's Independent Courts (county funded). This type of "historical" information is routinely entered into the JTS2000 record system by staff in DJJ and shared court service offices when a youth is admitted to a Regional Youth Detention Center (RYDC).

This meant information for youth placed on probation by an independent court, but never subsequently admitted to an RYDC, was missing in JTS2000. This process biased probation recidivism rates; they only approximated a state-wide measure.

In an attempt to remedy the problem with probation data and provide better estimates in response to State Legislative requests, DJJ's Chief of Staff asked all independent courts to share relevant information on youth placed on probation in their jurisdictions. Three counties (Fulton, Clayton, and Gwinnett) were able to contribute their historical data in time to be included in the FY2005 recidivism report. Probation data for the remaining independent courts were not used in our recidivism calculations for this report.

While several other counties have subsequently responded their data will have to be included in the FY2006 report. However, current probation recidivism rates still remain biased in DJJ's five administrative regions depending upon the number of independent courts in the region.

¹ Research Brief: Baseline Recidivism Rates FY1998 – FY2002, March 2004.

EXECUTIVE SUMMARY

Information in this report is organized in two parts.

Part 1. In this part we provide updated one, two, and three-year recidivism rates for the three major types of programs operated by DJJ over the past six fiscal years (FY1998 through FY2003). *See the sidebar for a program summary.*

Two measures were used to assess the post-release criminality of 95,946 youthful offenders who were placed on *Probation*, released from a *Short Term Program (STP)* or a *Commitment Program* during this period. Commitment programs include Non-Secure Residential programs, Home placements, and *YDC* facilities. Tables for the individual commitment programs are available in Appendix A. Youth were designated as part of a program's "release" cohort if they were placed "at risk" for re-offending in their community during the same fiscal year.

Recidivism Summary FY98-FY03 Programs

DJJ Program	JJ Program Number Released R		Average 3-Year Rate (%)
Probation	52,660	13.5	30.8
STP (Total)	27,559	38.1	54.8
Commitments (Total)	15,727	27.8	49.7
Combined Programs (FY98-FY03)	95,946	22.9	40.7

The post-release criminality of a cohort's members was assessed by a "recidivism rate" (the percentage of releases that failed at some point during their three-year follow-up period) and the average number of days elapsing between the youths' release and their first recidivating event during their follow-up ("Time-To-Failure" or TTF).

Part 2. In this part we present new findings from an ongoing study of how demographic and youth characteristics affect recidivism. The new variables we examined consisted of youth responses to selected questions drawn from the *CRN*,² and the poverty level in a youth's county of residence. The poverty measure was obtained from the 2000 Census. An average one-year recidivism rate based on combined DJJ programs was used to assess the post-release criminality of youth released during FY02-FY03.

Basic Findings: Part 1

We used an analysis of variance (ANOVA) to determine if a change in 1-year recidivism rates was significant or could have occurred by chance. Using this procedure we compared a program's rate in FY03 with its average for FY98-FY02. For 3-year rates, the comparison was between a program's rate in FY01 (most current cohort with three years of follow-up) and the program's average for FY98-FY00 (all previous cohorts with three years of follow-up).

One Year Recidivism Rates. One-year recidivism rates for all major programs changed significantly in FY03.

- STP rates decreased 20% (down from 39.2 in FY98–FY02 to 31.4 in FY03).
- Commitment program rates decreased 16% (down from 28.4 in FY98–FY02 to 23.9 in FY03).
- Probation rates increased 88% (up from 12.0 in FY98–FY02 to 22.6 in FY03).

The increase in Probation recidivism rates appears to be, at least in part, the result of not using prior Probation dispositions for youth that received such a disposition from an independent court in our rate calculations.

Three Year Recidivism Rates. Three-year recidivism rates for all major programs changed significantly in FY01.

- Commitment program rates decreased 13% (down from 51.3 in FY98–FY00 to 44.5 in FY01.
- STP rates decreased 9% (down from 55.9 in FY98–FY00 to 50.8 in FY01.
- Probation rates increased 29% (up from 28.9 in FY98–FY00 to 37.4 in FY01.

² Comprehensive Risk/Needs Assessment (CRN).

Basic Findings: Part 2

Three new variables drawn from items on the CRN and one from county level data (Census 2000) were found to have a significant effect on 1-year recidivism rates. The charts on the right summarize the effects these variables had on 1year recidivism rates. They have been ordered by the variables' impact on recidivism.

Youth assessed on the CRN as having both criminal opportunities and criminal peers or associates had almost a 21% higher 1-year recidivism rate than youth assessed as having no criminal opportunities or criminal peers and associates.

Youth under 14 years of age experienced the largest effect (a 28% higher 1-year rate).

Youth assessed as having behavior problems in school had almost a 21% higher 1-year recidivism rate than youth assessed as having no behavior problems in school.

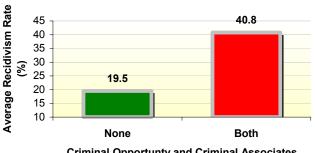

Youth under 14 years of age experienced the largest effect (a 30% higher 1-year rate).

Youth assessed as having substance abuse problems had almost a 12% higher 1-year recidivism rate than youth assessed as having no substance use problems.

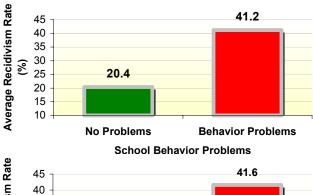

Youth under 14 years of age experienced the largest effect (a 23% higher 1-year rate).

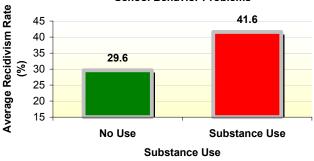

Youth residing in counties with over 10% of the population living below the poverty level had a 7% higher 1-year recidivism rate than those living in counties where less than 10% of the population fell below the poverty level.

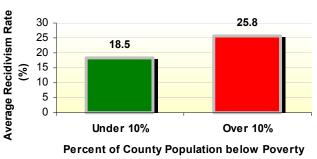

Again, youth under 14 years of age experienced the largest effect (a 16% higher 1-year rate).

Criminal Opportunty and Criminal Associates

Level

Conclusions & Recommendations

•	Conduct a study of the type of placements and services different age groups have received and examine
	the influence other variables, e.g., family characteristics, education levels, mental health needs, and the
	level of after-care services and contacts, have had on age-specific recidivism rates and Time-To-
	Failure. This would help in better understanding, evaluating, and developing new service offerings.

•	Develop a recidivism	and TTF	based	evaluation	model	better	suited	to as	ssessing	the	impact	of
	programmatic changes	occurring	in sma	all samples	. This	would	d extend	the	benefits	and	l value	of
	recidivism studies											

INTRODUCTION

Recidivism, or post-release criminality, is measured in terms of the time elapsing between two events. Measurement starts the first day a youth becomes "at risk" for re-offending in the community and ends the day a new qualifying offense occurs.

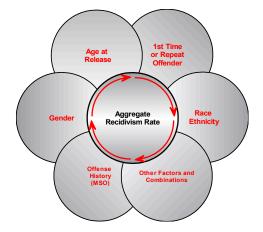

States that report recidivism figures for juveniles vary widely in their definition of what constitutes "release," "recidivism," as well as the length of the measurement or follow-up periods they employ. Their outcomes, however, are generally expressed as a "recidivism rate;" which is simply another way of saying the percentage of releases that re-offended or failed at some point during a state's designated follow-up period.

Recent state recidivism reports often include cautionary notes about comparing recidivism rates. There is good reason for this practice. While recidivism rates for different programs and release methods can be compared, differences cannot be automatically attributed to the program/release method. A recidivism rate reflects the aggregate outcome of a quite complex process. Since recidivism rates are closely related to the length of the follow-up period, longer periods at risk (1-year vs. 2-years or 3-years) typically show higher levels of failure. Before we can safely compare recidivism rates, we need to ensure that the measurement processes are comparable in terms of:

- The definition of a failure or recidivating event,
- The amount of time allowed for tracking offenders to determine post-release criminality,
- The basic characteristics of the offenders released during a specified period of time and,
- How basic offender characteristics and other factors affected the aggregate rate.

In DJJ's 2004 recidivism report a number of youth characteristics, demographic, and criminal history related factors were identified as influencing our young offender's recidivism rates. A number such factors were again selected for further examination in this study:

- Gender
- Race
- Age at release from a program
- 1st Time or Repeat Offender Status
- Most Serious current offense
- Length of Stay (LOS) in a program,
- Number of prior contacts with the court
- DJJ Region (youth's residence)
- Poverty Levels in the county of residence
- Youth Substance Use
- School Behavior Problems, and
- Criminal Opportunities and Criminal Peers/Associates

PURPOSE

In this report we had two basic objectives:

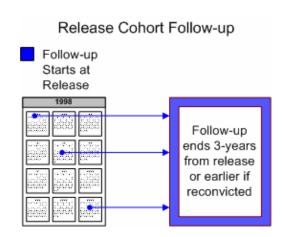

- 1. To update the 1-year, 2-year, and 3-year recidivism rates and Time-To-Failure (TTF) measures for DJJ's three major types of programs: Probation, Short Term (STP), and Commitments (including Non-Secure Residential Commitments, Home Commitments, and YDC commitments).
- 2. Determine if any of the new variables introduced in this study (youth responses to various CRN items and county level demographics) have significant effects on recidivism rates.

METHODOLOGY

DJJ's definition of a recidivist specifies three key features about how we measure recidivism:

- Requires an adjudication on a new delinquent charge or a conviction as an adult,
- Requires a "standard" three-year follow-up period to determine post-release criminality for released youth and,
- Implies dual searches of records from DJJ's Juvenile Tracking System (JTS2000) and Georgia's Department of Corrections to determine releases with a new adjudication on a delinquent charge or an Adult Probation or Adult Prison sentence (see Appendix B for a list of qualifying offenses).

The Georgia Department of Juvenile Justice defines a recidivist as a youthful offender who has been adjudicated on a new delinquent charge or convicted as an adult within three years after release from, or while under an active juvenile court order of Probation, Commitment, or a Short Term Program (STP).

Release Cohorts

All youth released from a given type of program during the same fiscal year were designated a release cohort, e.g., the FY98 Probation cohort, the FY03 STP cohort, etc.

Each youth in the FY98 - FY01 cohorts was followed-up for 3-years after their release date (their first day at "risk" in their community + 1,095 days). For example, all youth released from the five types of programs during the period from July 1, 1997 to June 30, 1998 (the FY98 cohorts) were tracked until June 30, 2001.

Youth released from the five programs during the period from July 1, 1998 to June 30, 1999 (the FY99 cohorts) were tracked until June 30, 2002.

Youth released from the programs during the period from July 1, 1999 to June 30, 2000 (the FY00 cohorts) were tracked until June 30, 2003. Currently only those youth released during FY98 - FY01 could be tracked for a full three years. Youth released from programs during FY02 were tracked for 2-years; those released during FY03 were tracked for 1-year.

Variables & Data Analysis

Thirty data sets, six each for the five program cohorts contained 318 variables extracted or subsequently computed from data in DJJ's JTS2000 record system. The variables represented various youth and offense characteristics, the event dates necessary to calculate the TTF and recidivism measures, selected items from Part 1 of the Comprehensive Risk & Needs Assessment (CRN), as well as various county population level descriptors from the 2000 Census. All data sets were then merged and frequency counts run on the variables to determine the extent of any missing data elements in the records.

SPSS (*Statistical Package for the Social Sciences*, V.13) routines were used to conduct cross-tabulations, logistic and Cox regression analyses, and ANOVA (analysis of variance) tests between the TTF measures and recidivism rates. The significance level set for rejecting a hypothesis of no difference between event measures (the "null" hypothesis) was set at the 5%-level (P = .05, two-tailed test).

RESULTS & DISCUSSION

PART 1

Overview of the Recidivism Process

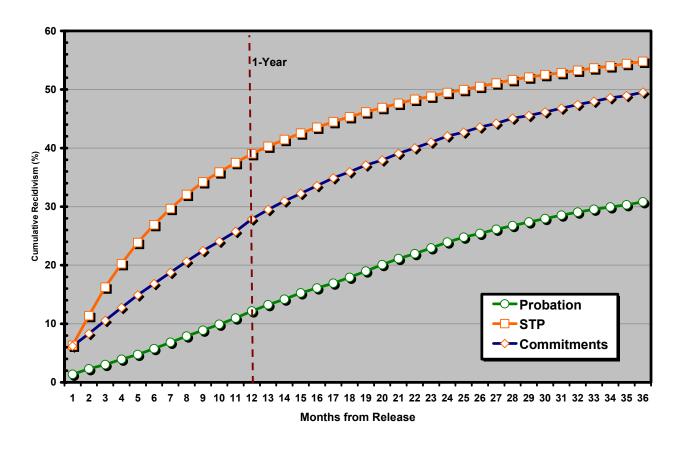

We can see in the sidebar and Figure 1 that there were large differences in the 1-year and 3-year recidivism rates for the three programs. Releases from STP programs had the highest average 3-year recidivism rate (55%); followed by releases from the Commitment programs (50%), and finally by Probation placements (31%).

DJJ Program	1yr Recidivism Rate	3yr Recidivism Rate	% Youth Returning in 1yr
STP	38	55	71
Total Commitments	28	50	56
Probation	14	31	39

The most striking feature about Figure 1 is the large difference in the percentage of youth that re-offend at some time during their first 12-months after release. For example, with the STP cohorts, over 70% of the total youth that we know failed in three years, did so within the first twelve months. In contrast, while the Probation cohorts had the lowest 3-year recidivism rate, 39% of the cohort's total recidivists re-offended within their first year after release.

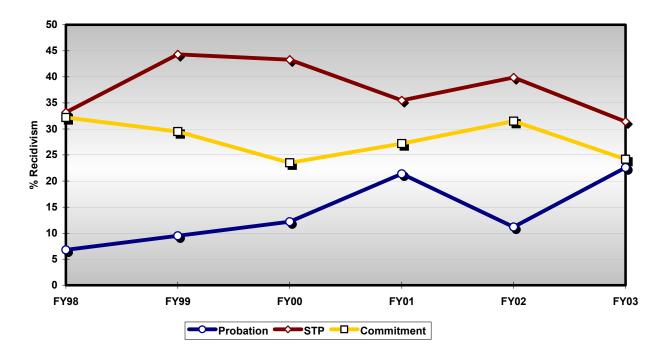

A large percentage of youth fail within a year after being placed "at risk." Recidivism studies typically report this pattern of early returns. The high proportion of "early returns" for program releases indicates we should be focusing more attention on identifying the periods of greatest risk in particular communities for different types of offenders. The process should start from the first day youth are released. Survival analysis procedures and Time-To-Failure (TTF) measures can be used to identify periods of higher risk in specific regions and communities for different age groups, as well as assessing the effectiveness of programmatic changes made to address the "early return" problem.

Figure 1. Cumulative Monthly Recidivism Rates for the Three Major Programs (FY98-FY01 Cohorts).

In what follows, we will briefly discuss the recidivism and TTF trends for 1-year and 3-year follow-up periods for the three major programs. More detailed breakdowns for recidivism rates and Time-To-Failure measures for five programs are presented in Tables 1 - 12 (Appendix A).

One Year Recidivism Trends

1-Year Recidivism Rate Comparisons

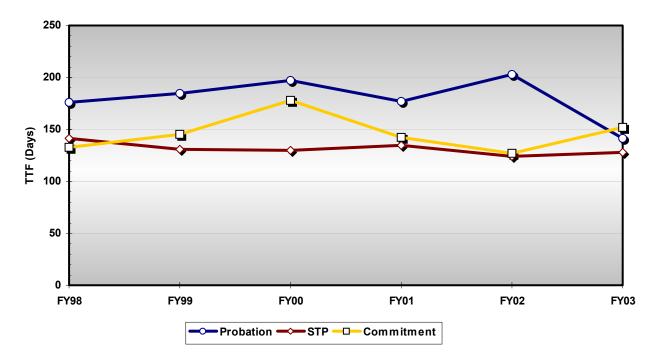

Program	Program Norm Period Rate Comparison Year		Percent	Significant
Flogram	FY98-FY02	FY03	Change	Change
Probation	12.0	22.6	88.3	YES (p=.000)
STP	39.2	31.4	-19.9	YES (p=.000)
Commitment	28.4	23.9	-15.8	YES (p=.000)

One Year Recidivism Rates. One-year recidivism rates for all major programs changed significantly in FY03.

- STP rates decreased 20% (down from 39.2 in FY98–FY02 to 31.4 in FY03).
- Commitment program rates decreased 16% (down from 28.4 in FY98–FY02 to 23.9 in FY03).
- Probation rates increased 88% (up from 12.0 in FY98–FY02 to 22.6 in FY03).

The increase in Probation recidivism rates is, in large part, the result of not using prior Probation dispositions in calculating rates for youth receiving this type of disposition from an independent court. Disregarding prior Probation dispositions does not affect STP or any of the Commitment program rates.

One Year Time-To-Failure Trends

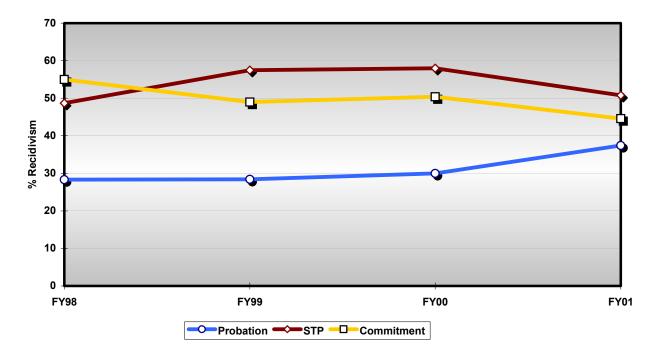

1-Year Average Time-To-Failure (Days) Comparisons

		. , , .		
Program	Norm Period Rate	Comparison Year Rate	Percent	Significant
Program	FY98 - FY02	FY03	Change	Change
Probation	187	141	-24.6	YES (p=.000)
STP	132	128	-3.0	NO (p=.220)
Commitment	166	151	-9.0	NO (p=.077)

One Year Time-To-Failure. Only one TTF measure changed significantly in FY03.

- The TTF for the Probation cohort decreased 25% (down from 187 days in FY98–FY02 to 141 days in FY03). In FY03 youth re-offended, on the average, about a month and a half sooner (46 days) than they did in the previous five years.
- While the STP and Commitment cohorts also showed shorter TTF these relatively small decreases were not significant.

Three Year Recidivism Trends

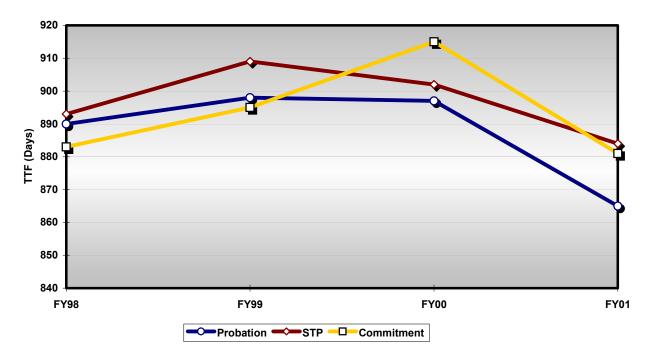

3-Year Recidivism Rate Comparisons

Program	Norm Period Rate FY98 - FY00	Comparison Year Rate FY01	Percent Change	Significant Change
Probation	28.9	37.4	0	YES (p=.000)
STP	55.9	50.8	-9.1	YES (p=.000)
Commitment	51.3	44.5	-13.3	YES (p=.000)

Three Year Recidivism Rates. Three-year recidivism rates for all major programs changed significantly in FY01.

- Commitment program rates decreased 13% (down from 51.3 in FY98–FY00 to 44.5 in FY01.
- STP rates decreased 9% (down from 55.9 in FY98–FY00 to 50.8 in FY01.
- Probation rates increased 29% (up from 28.9 in FY98–FY00 to 37.4 in FY01.

Three Year Time-To-Failure Trends

3-Year Average Time-To-Failure (Days) Comparisons

Drogram	Norm Period Rate	Comparison Year Rate	Percent	Significant
Program	FY98 - FY00	FY01	Change	Change
Probation	895	865	-3.4	YES (p=.000)
STP	900	884	-1.8	YES (p=.042)
Commitment	899	881	-2.0	NO (p=.052)

Three Year Time-To-Failure. Two program TTF measures changed significantly in FY01.

- The TTF for the Probation cohort decreased 25% (down from 187 days in FY98–FY02 to 141 days in FY03). In FY03 youth re-offended, on the average, about a month and a half sooner (46 days) than they did in the previous five years.
- While the STP and Commitment cohorts also showed shorter TTF these relatively small decreases were not significant.

Basic Characteristics Affecting Recidivism

A regression analysis indicated that seven of the eight factors identified in the 2004 recidivism report continued to have an impact on recidivism rates and "Time-To-Failure." The eighth factor, "DJJ Region" was replaced by a new factor, the percentage of a county's population living below the poverty line. Age-at-Release, Gender, 1st-Time Offender status, and Length of Stay (LOS) in a program remained the most influential factors across programs. The following comments are based on the program outcomes in the sidebar.

Age-at-Release. Youth younger than 14 have consistently had the highest 1-year and 3-year recidivism rates across programs. Similarly, those over 16 years of age have had the lowest rates. The difference between the two age groups after one year of follow-up is 20%. After three years the difference between them increases to 30%.

Gender. Males consistently recidivate at significantly higher rates than females. After one year of follow-up, males have an 8% higher recidivism rate. After three years, the gender difference has increased to 20%. However, after three years of follow-up there is very little difference in the average amount of time they take to re-offend.

Criminal History. First-Time offenders have consistently recidivated at significantly lower rates than youth admitted with at least one prior offense. The difference between 1st-Time and Repeat offenders' recidivism rates is 18% after one year of follow-up. After three years, the difference increases to 23% across programs.

Length of Stay (LOS). For Probation, Non-Secure Residential, and Home commitment cohorts, LOS actually represents the length of time youth were supervised and treated in the community *after placement*. We can see in the sidebar that the supervision and treatment strategies associated with Probation, Non-Secure Residential commitments, and Home commitments have quite different TTF's. Moreover, these effects are maintained across all age-at-release groups.

There are several ways to assess the effectiveness of community based supervision and treatment on re-offending. Ranking these programs on the basis of their associated TTF provides one index of their relative effectiveness. For example, if youth in

^{*}Non-Secure Residential Commitments

program-A are found to have a significantly longer TTF than those in program-B, then program-A can be said to be more effective, all other things being equal, since it lengthened the time youth took to re-offend.

The ranking for TTF's from DJJ's Probation, Non-Secure Residential commitment, and Home commitment programs is as follows:

Program Ranking based upon TTF for 1-year of Follow-up

(1) Probation TTF: 176 days to re-offend on the average

(2) Non-Secure Residential Commitments TTF: 148 days to re-offend on the average

(3) Home Commitments TTF: 110 days to re-offend on the average

All programs are significantly different from each other (p< .05)

Length of Supervision Effects on Recidivism.

Another way to assess the effectiveness of community based supervision and treatment on reoffending is to examine the follow-up recidivism rates for youth who successfully completed different lengths of supervision.

The effects three different lengths of supervision had on subsequent 1-year recidivism rates are presented in the sidebar (see also Exhibit A). If we use a ratio of recidivism rates (ratio of percentages), we can see from the total or "Three Programs Combined" section that:

• Overall: Youth supervised for 6-months or less are three times as likely to recidivate in the subsequent 12-months as youth supervised for 1-year or more (24.1% / 8.0% = 3.01).

Similar supervision effects can be seen for each type of program placement, as well as for males and females, 1st-Time and Repeat offenders, and for youth under 16; although these effects are largest for youth placed on Probation:

- **Probation**: Youth supervised for 6-months or less are about three times as likely to recidivate in the subsequent 12-months as youth supervised for 1-year or more (20.6% / 7.0% = 2.94).
- Non-Secure Residential Commitments: Youth supervised for 6-months or less are about 1.4 times as likely to recidivate in the subsequent 12-months as youth supervised for 1-year or more (28.5% / 20.5% = 1.39).

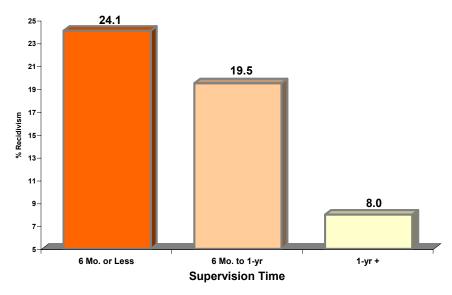

1-year Recidivism Rates after Different Supervison Periods

*Non-Secure Residential Commitments

• **Home Commitments**: Youth supervised for 6-months or less are about two times as likely to recidivate in the subsequent 12-months as youth supervised for 1-year or more (34.2% / 20.1% = 1.70).

Exhibit A Supervision Time & Recidivism Rates

With two other types of DJJ programs, STP and YDC commitments, LOS (Length of Stay) measures the time youth spent in a DJJ facility prior to their release. It can be used in conjunction with recidivism rates to assess a program's relative effectiveness after youth are released (all other things being equal, e.g., program treatment time, and the level of after-care services and contacts).

Length of Stay Effects on STP Recidivism Rates.

We can see in the sidebar and Exhibit B that the length of time youth spend in an STP program has a significant impact on their 1-year recidivism rates.

With the STP cohorts, an LOS over 60-days is associated with significantly higher recidivism rates. In general we can see that:

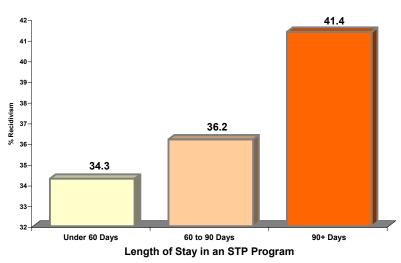

• Youth serving over 90-days in an STP program are about 1.2 times as likely to recidivate in the subsequent 12-months as youth supervised for 60-days or less (20.6% / 7.0% = 2.94).

Longer LOS periods are associated with higher recidivism rates for males and females, 1st-Time and Repeat offenders, and for all age-at-release groups.

1-year STP Recidivism Rates for Different LOS Periods

DJJ Short-Term	Number	Av.1- Year	1-yr Rates by Length of Program Stay		
(STP)	Released	Rate	Under	60 to 90	90+
		(%)	60 Days	Days	Days
Under 14 yrs.	2,990	55.5	48.0	54.8	59.7
14 to 16	20,160	39.9	35.8	37.8	43.7
Over 16 yrs.	4,409	17.9	15.5	17.3	19.4
1st Time	10,941	23.7	21.0	20.9	27.8

Total	27,559	38.1	34.3	36.2	41.4

Exhibit B
Length of Stay in an STP Program & Recidivism Rates

Length of Stay Effects on YDC Recidivism Rates.

We can see in the sidebar and Exhibit C that the length of time youth spend in an YDC program has a significant impact on their 1-year recidivism rates.

In general, for youth in the YDC cohorts, an LOS of 1-year or less is associated with significantly higher recidivism rates. More specifically, we can see that:

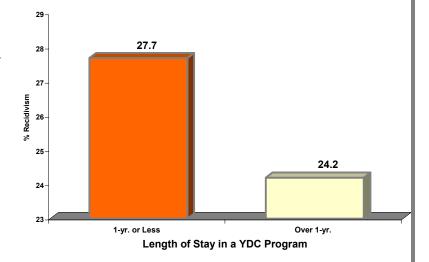

• Youth serving 1-year or less in a YDC program are about 1.1 times as likely to recidivate in the subsequent 12-months as youth supervised for 1-year or more (27.7% / 24.2% = 1.14).

An LOS of 1-year or less is associated with higher recidivism rates for males and females, 1st-Time and Repeat offenders, and for youth over 16 years of age at release. However, for youth less than 16 years of age at release, this shorter LOS period is associated with significantly *lower* recidivism rates.

1-year YDC Recidivism Rates for Different LOS Periods

DJJ YDC	Number	Av.1- Year	1-yr Rates b Prograr	
Commitments Released Rate (%)		1-yr. or Less	Over 1-yr.

Total	7,009	26.8	27.7	24.2

Exhibit C: Length of Stay in a YDC Program & Recidivism Rates

PART 2: Other Characteristics Affecting Recidivism

A regression analysis indicated that the four factors shown the sidebar had a significant impact on recidivism rates.

However, it is important to note that the analysis of the CRN items was based solely on the FY02-FY03 cohorts; since consistent use of this new instrument occurred during this period. This reduced the initial sample size for analysis and restricted comparison to a 1-year average rate over two years. More importantly, youth who were not given the CRN and/or chose not to respond to particular questions reduced the sample further. Basically, this means that at present the recidivism rates for these new factors should not be compared to other program rates.

While only a small number of CRN items were included in our analysis, it is clear the CRN provides a source of some quite useful information for future recidivism studies.

At present, it appears that the effects of substance use, poverty, school behavior problems, and having criminal opportunities and criminal peers/associates in a youth's environment all have the greatest impact on youth under the age of 14.

Census 2000 data

State Recidivism Comparisons

Relatively few states report measuring juvenile recidivism. A recent survey (1999) of juvenile justice agencies conducted by the Florida Department of Juvenile Justice, found only twenty-six states using some method to assess juvenile recidivism. As noted previously, states that report recidivism rates vary widely in their definition of "release," "recidivism," and the length of follow-up periods used to calculate their rates. The variations are shown below.

Recidivating Act								
Group Studied	Referral or Arrest	Juvenile Adjudication or Adult conviction	Juvenile Commitment or Adult Sentence					
First-time offenders	Alaska (3), Florida, Maryland1, Virginia	Florida, Georgia	Florida (2), South Carolina (5)					
Youth discharged From juvenile justice programs	California, Delaware (3), Florida, Maryland, Mass (3), NY, Texas, Ohio (4), Oregon1, South, Dakota (3)	Florida, Idaho(3), Maine (3),	Arkansas, Florida, Georgia, Illinois, Indiana, Louisiana, Maryland, Mass (3,5), Nebraska, North Carolina, North Dakota, South Carolina (5), Tenn. (3), Texas					

¹ juvenile re-referral only; 2 juvenile program or transfer to adult court; 3 in process, no rates available; 4 combined measure of rearrest, readjudication, commitment, conviction, or crime-related death; 5 adult probation or incarceration only

rearrest, readjudication, commitment,

S	Georgia, FY03	31%						

The recidivism rates reported by other states for different programs shown in the sidebar, use a definition of recidivism that is comparable to the one used by Georgia's Department of Juvenile Justice.

The length of the follow-up period was typically one-year. Rates based upon a one-year follow-up period provide quick turn-around for yearly reporting, as well as focusing attention on the important *early phase* of the recidivism process.

The majority of youth that will recidivate during a three year follow-up period usually do so within their first year after release (early returns). Longer follow-up periods are better for capturing "treatment" effects that may not have fully manifested themselves within a year.

Probation. Georgia's 1-year recidivism rates for the FY98-FY03 Probation cohorts are lower than the rates reported by Florida. Georgia's 3-yrear rates are typically lower than the rate reported by Texas in FY96.

Based upon the limited data we have at present, Georgia's 1-year, and 3-year recidivism rates for youth placed on probation during the FY98-FY03 period are generally lower than the rates reported by Florida and Texas.

Commitment Programs. Georgia's 1-year recidivism rates for youth released from the FY98 through FY03 Commitment cohorts are quite comparable to the rates reported by four other states during a similar time frame: Florida, Oregon, Maine, and Texas. Based upon the somewhat larger number of state reports we have at present, it seems that Georgia's 1-year recidivism rates for releases from Commitment programs is fairly "typical."

Short-Term Programs. Releases from DJJ's STP programs show higher 1-year recidivism rates than releases from the three comparison programs. Based upon the comparative data we have, Georgia's 1-year recidivism rates for STP releases during the FY98-FY03 period have generally been higher.

Conviction for a New Offense Defined

Convicted for a new offense. Not a revocation or administrative action. Must be Probation, STP, STP/Probation, STP/CMT, Regular Commitment, Designated Felony Commitment, Superior Court Commitment, or a conviction resulting in Adult probation or Adult Prison). The offense itself must be considered a crime as an adult. All technical violations and status offenses are not new offenses as well as minor traffic (i.e., speeding, failure to yield, traffic), loitering, and contempt of court). All non-offense codes are listed below. Release Cohorts. Only the first release within the fiscal year will be followed making the release cohorts unduplicated within the year.

Legal Actions to Exclude

	Logal Actions to Exclade						
Rank	Description						
0	Revocation-Administrative action						
0	Informal Adjustments-Administrative action						
0	Abeyance						
-1	Suspension						
-1	Dismissal						
-1	Withheld
